Electronics group

SAAT Electronics group produces the electronic equipments and offers various products to complete the company's list of products. It benefits from years of experience of designing, production and engineering for professional localization of electronic and hardware equipments.

Teleprompter Pedal

Teleprompter Pedal heavy duty weighted Prompter People Foot Pedal allows talent to control start, stop, forward, reverse, and speed functions of scrolling text. The SAAT Protocol interfaced device uses no extra Power so there are no power cords or adapters needed.

Wire Pedal

RF Pedal

Teleprompter Jog Shuttle

Teleprompter Jog Shuttle designed, desk-based prompting software scroll controller with a jog and one scroll wheel. Controller is connected to Teleprompter Lan Interface via SAAT portocol.

The controller can be used as an alternative to keyboard arrow/ number, pedal or mouse scroll.

Please note, the 15 programmable buttons are set to defaults by the manufacturer and cannot be changed.

IMA Prompter

Easy

Telepromptersystems are used to display the news texts for presenters helping them not to look down at the written notes and perform the news while directly looking into the lenses. In this system the text is displayed on a screen which is usually horizontally placed below the camera lens and the words are reflected by a glass which is placed in front of the lens (and the presenter sees that like a mirror) so that the presenter can watch them and control the motion of displayed text by using a pedal.

Flexible

IMA Teleprompter can either be integrated with IMA Newsroom. In this case, IMA Teleprompter automatically receives the news texts and produces a list of them. Furthermore, the text can be edited while the presenter is reading the news. The connection between the presenter and the control room is a particular advantage of this system. While performing the news, the control room can send messages to the presenter or receive presenter's requests

Advanced

IMA Teleprompter system consists of both hardware and software parts and is managed via a simple user interface. This system provides different types of outputs for both camera and monitors in the control room. By connecting to the LAN, both studio equipments and central control unit work under the network structure.
